Multi-Media PDF Files

vablet™

The vablet™ app is the most secure and effective solution for file access and content management on mobile devices. This guide will show you how to enrich your PDFs with multi-media, such as: video, HTML5, hyperlinks, etc... If authored locally, all links are active offline as well.

Step 1
Gather All Media into One Location

Save all the media to one folder on your computer and name it /MultiMedia (case sensitive). This enables quick access during authoring in Step 2, and will prepare your file for upload to the vablet app.

Step 2
Author the PDF

Create desired links to the media within the PDF file, including media that will play remotely, i.e. Youtube, HTML5. Feel free to create sub-folders of images or media, as needed.

Use the following link protocol for the interactive media being inserted into the PDF document:
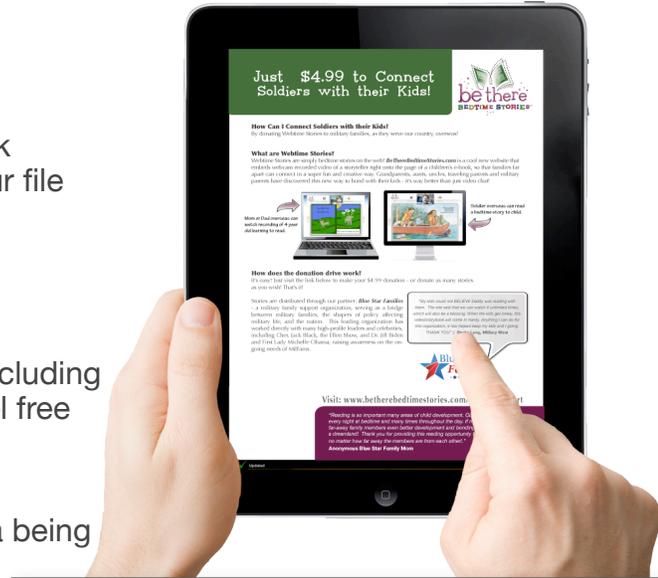

Media Type	Local	Remote
Overlay Movie	fpkv://	fpky://
Overlay HTML	fpkh://	fpkw://
Overlay Audio	fpka://	fpkb://

Step 3
Uploading the Media

Save your PDF file as Main.pdf into the /MultiMedia folder. Then zip or compress the folder and rename the zip file with the extension .fpk to prepare for the Upload Manager on the Admin Console **(admin.vablet.com).**

Upload Media

Media Library

Change File

Upload a new file to replace current file

Choose File | No file chosen
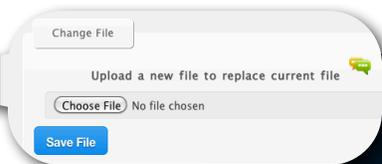

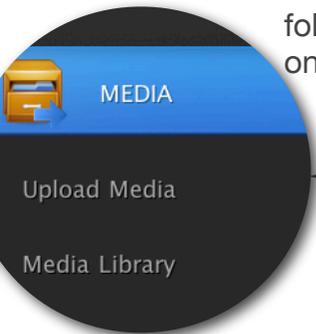

Save File

Need to Make Changes? No Problem, just make your changes and save them to your existing folder on your computer and compress/zip the new folder. Then replace the existing file in the Media Library by clicking to Edit the file; look for the 'Change File' option towards the bottom.
